### **DETAILED ACTION**

Claims 25, 26, 30, 41 and 42 are objected to because of the following informalities: they contain capitalized words in the body of the claim. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 24-46 are rejected under 35 U.S.C. 102(b) as being anticipated by DE 100 32 340.

The German patent documents to Dominke et al. discloses the same information as in US patent 6,640,923 to which this rejection shall refer. The detailed description in columns 4 and 5 of the patent . The instantaneous yaw rate  $w$  is fed to the dynamics regulator 41 along with the predefined operator variable which is the speed  $v$ . The instantaneous steering angle  $g_h$  and nominal steering angle  $\delta_{red}$  by sensor 9 are used to determine an additional torque steering  $\Delta M_{setpoint}$ . The yaw rate is established depending on the steering angle set by the operator. Columns 4-6 disclose the specifics adjusting the steering torque based on the yaw rate.
